Children need MUA
2 arm placed in supination
2 POP (cubor)

Adults: ORIF radius
usually allows spontaneous
reduction of ulnar head.

Look for Galeazzi pseudos
prominent ulna head & wrist
pain → excise ulna head.

Isolated Radius #
Exclude a Galeazzi #/dislocation pattern.
If no significant angulation or rotational displacement
→ POP cast in supination

Careful surveillance for slip. Any angulation can
result in a delayed Galeazzi pattern.
